1. System Overview

The Point of Sale (POS) system is a web-based ERP solution designed to manage complete company operations including customer management, sales tracking, inventory control, financial reporting, and administrative access controls. The interface is user-friendly with a structured navigation menu and real-time dashboard insights.

System Highlights

- Web-based access no local installation required
- Real-time dashboard with key business metrics
- Role-based access control for users and staff
- Multi-branch / multi-company support
- Complete sales lifecycle: order → invoice → receipt → return
- Integrated inventory management with barcode support
- Financial reporting including ledger and receivables

System Modules at a Glance

Module	Key Functions
1. Company	Customer management, receipts, ledger, receivables
2. Product	Categories, inventory, stock reports, barcodes
3. Sales	Sales orders, invoices, returns, sale register
4. Administration	Users, permissions, branches, preferences, bulk imports

2. Getting Started

2.1 Logging In

To access the POS system, open your web browser and navigate to the system URL provided by your administrator. The login screen will appear.

The image shows a login screen for a system called 'WORKFORXE'. At the top is a logo consisting of a blue sphere with a white 'V' shape inside. Below the logo is the text 'WORKFORXE'. The main heading is 'Login to your account'. There are two input fields: 'Username' and 'Password'. Below these is a teal button with the text 'LOGIN' and a right-pointing arrow. At the bottom, there is a checkbox labeled 'Remember me'.

Login Steps

1. Open the POS URL in your browser (Chrome or Edge recommended).
2. Enter your Username in the first field.
3. Enter your Password in the second field.
4. Optionally check Remember Me to stay logged in on this device.
5. Click the Login button. You will be directed to the main Dashboard.

2.2 Navigation

The main navigation menu is located on the left sidebar. It organizes all features under four top-level modules: Company, Product, Sale, and Administration. Click any module to expand its sub-menu and access specific screens or reports.

3. Module 1: Company

The Company module handles all customer-related operations, including managing customer profiles, recording receipts, categorizing customers, and assigning sales personnel. It also provides financial reports such as the Ledger and Receivables.

Section	Type	Purpose
Customer	Screen	Add, edit, and manage customer profiles
Customer Receipt	Screen	Record and manage payments received from customers
Customer Type	Screen	Categorize customers (e.g., Retail, Wholesale)
Sale Person	Screen	Manage sales team members and assignments

Section	Type	Purpose
Ledger	Report	Full transaction history with debits, credits and balance
Receivable	Report	Outstanding payments and customer dues

3.1 Customer

The Customer screen is the central hub for managing your customer base. It displays a list of all registered customers and allows you to add new ones, edit existing profiles, or drill down into a customer's full history.

Viewing Customer History

Click on any customer name to open their Customer History page. This page consolidates the customer's complete record in one place:

- All sales transactions linked to this customer
- All receipts (payments) received
- Current outstanding balance

Receivable Report

The Receivable report shows all customers with outstanding balances. It is an essential tool for managing collections and monitoring overdue accounts.

The screenshot displays the 'Customer Receivable Report' interface. On the left, a sidebar contains two main sections: 'Definition' with links to 'Customer', 'Customer Receipts', 'Customer Type', and 'Sale Person'; and 'Reports' with links to 'Ledger' and 'Receivable'. The main content area is titled 'Customer Receivable Report' and includes a breadcrumb trail: 'Home > Customer Receivable Filter > Customer Receivable Report'. Below the title are 'Print' and 'Email' buttons. A toolbar shows a search bar with 'Find...', navigation icons, and a status bar indicating '1 of 1' and '100%'. The 'Main Report' window is open, showing a report titled 'Customer Receivable' for 'ALL BRANCHES' as of '06/05/2026' for 'Customer : All'. The report contains a table with the following data:

Customer Code	Customer Name	Customer Address	Amount
00004	Retail Company 1		161.40
Total:			161.40

4. Module 2: Product

The Product module provides end-to-end inventory management. It covers product setup, categorization, stock location management, unit of measurement configuration, and a comprehensive set of stock reports.

Section	Type	Purpose
Categories	Screen	Create and manage main product categories
Sub Categories	Screen	Define subcategories within main categories
Products	Screen	Add, edit, and manage all product details
Stock Location	Screen	Define storage locations (warehouse, store, etc.)
UOM	Screen	Define units of measurement (pcs, kg, liters, etc.)
Current Stock Summary	Report	Overview of all products' available quantities
Current Stock	Report	Detailed stock levels per product
Stock Ledger	Report	Full history of stock-in and stock-out movements
Product List	Report	Complete list of all products
Re-Order Level	Report	Products that have reached minimum stock threshold
Product Barcode	Report	Barcode generation and management

4.1 Categories

Categories are the top-level groupings for your products (e.g., Electronics, Clothing, Food). Create all main categories here before adding sub-categories or products.

4.3 Products

The Products screen is where you add and maintain your product catalogue. Each product record stores the following information:

Product Name: Unique name identifying the product

Description: Detailed description of the product

Category / Sub Category: Hierarchical classification

UOM: Unit of measurement (e.g., Each, Box, Kg)

Price: Selling price (and optionally cost price)

Barcode: Barcode number for scanning at POS

Stock Location: Default storage location

4.5 UOM (Unit of Measurement)

The UOM screen lets you define the units used when buying or selling products. Common examples: Pieces (pcs), Kilograms (kg), Liters (L), Boxes, Cartons.

The screenshot displays the 'UOM' (Unit of Measurement) management interface. On the left is a sidebar with a tree view containing 'Product' (with sub-items: Product Category, Product Sub Category, Products, Stock Location, UOM) and 'Product Reports' (with sub-items: Stock Reports, Product List, Re-Order Level, Product Barcode). The main area is titled 'Inventory' and 'UOM'. It features a form with fields for 'UOM Code', 'UOM Name', and a 'Status' checkbox (checked). Below the form are 'Save Record' and '+ New Record' buttons. A table below shows existing UOMs with columns: No, UOM Code, UOM Name, Status, and Action. The table contains four entries: 1 (Pcs, Pieces, Active), 2 (Nos, Numbers, Active), 3 (Weight, KG, Active), and 4 (Quantity, QTY, Active). A search bar and a '10 records' indicator are also present.

No	UOM Code	UOM Name	Status	Action
1	Pcs	Pieces	Active	
2	Nos	Numbers	Active	
3	Weight	KG	Active	
4	Quantity	QTY	Active	

4.6 Stock Reports

5	SKU2	Product 3	Finished	KG	20.00

Re-Order Level

This report flags products that have fallen below their minimum stock threshold. Use it to proactively generate purchase orders and prevent stockouts.

Product Barcode

Generate and print barcode labels for products. Select one or more products, choose the label format, and print directly from this screen.

5. Module 3: Sales

The Sales module manages the complete sales lifecycle from creating a sale order, to generating a formal invoice, to processing a return if needed. It also provides reports for tracking all transactions.

Section	Type	Purpose
Sale Order	Screen	Create and manage customer sales orders
Sale Invoice	Screen	Generate and manage invoices from orders
Sale Return	Screen	Process product returns and adjust records
Sale Register	Report	Detailed list of all sales transactions
Return Register	Report	All product returns with reasons and amounts

Sales Workflow

The typical sales process follows these steps:

6. Create a Sale Order with product details, quantities, and pricing.
7. Convert the order into a Sale Invoice, which includes taxes and totals.
8. Print or email the invoice to the customer.
9. Record a Customer Receipt (in the Company module) once payment is received.
10. If items are returned, create a Sale Return to reverse the transaction.

5.1 Sale Order

A Sale Order is the first step in the sales process. It records the customer's intent to purchase, capturing product details, quantities, and agreed prices before the final invoice is generated.

Key Fields

Customer: Select the customer placing the order

Sale Person: Assign a sales representative

Order Date: Date the order is created

Products: Add line items: product, quantity, unit price

Discount: Apply item-level or order-level discounts

Notes / Remarks: Optional internal or customer-facing notes

5.2 Sale Invoice

The Sale Invoice is generated from a Sale Order and constitutes the official billing document sent to the customer. It includes all tax calculations, totals, and can be printed with receipt details.

Key Fields

Invoice Date: Date the invoice is issued

Due Date: Payment due date

Products & Quantities: Confirmed from the sale order

Tax / VAT: Applicable taxes calculated automatically

Grand Total: Final amount payable by the customer

Receipt Detail: Payment receipt information if already paid

5.3 Sale Return

The Sale Return screen is used when a customer returns products. Creating a sale return automatically adjusts inventory (adding stock back) and updates the customer's financial records (creating a credit).

When to Use

- Customer received damaged or incorrect goods
- Customer changed their mind within return policy
- Partial returns on an invoice

26050001	06/05/2026		ABC		10.00	0.00	0.00	10.00
Sub Total :								10.00
GST :								0.00
Add. Tax :								0.00
Total :								10.00
Discount :								0.00
Grand Total :								10.00

6. Module 4: Administration

The Administration module provides system configuration and control tools. It is typically restricted to administrators and covers branch management, system preferences, user management, access rights, bulk data imports, and administrative reports.

Section	Type	Purpose
Branch	Screen	Create and manage multiple branches or companies
Preferences	Screen	Configure system-wide default settings and account mappings
Users	Screen	Create and manage system user accounts
User Rights	Screen	Define role-based permissions for each user
Import Items	Admin Action	Bulk upload products via Excel/CSV
Import Customers	Admin Action	Bulk upload customers via Excel/CSV
User Activity	Report	Audit log of user actions in the system
Active Users	Report	List of currently logged-in users
Users List	Report	Full list of all system users

6.1 Branch

The Branch screen allows you to operate multiple companies or store locations within a single POS installation. Each branch can have its own settings, users, and data.

Branch	
Branch Name	
Address	
Phone	
Email	
Website	
VAT No.	
Company No.	
Head Office	☒
Image	

6.2 Preferences

The Preferences screen allows administrators to set system-wide defaults, such as default accounts, tax settings, invoice numbering, and other configuration values that affect how screens behave across the system.

6.3 Users

The Users screen is used to create and manage all system user accounts. Each user is assigned login credentials, basic personal information, and an active/inactive status.

Key Fields

Username: Unique login identifier for the user

Full Name: User's display name

Password: Secure login password (hashed in the system)

Branch: Assign the user to a specific branch

Status: Active (can log in) or Inactive (blocked)

6.4 User Rights

User Rights is where administrators define what each user or role is allowed to do in the system. This is a critical security configuration that ensures staff can only access the functions relevant to their role.

Permission Levels

Permission	Description
View	User can see the screen and its data, but cannot make changes
Add	User can create new records
Edit	User can modify existing records
Delete	User can remove records from the system
Reports	User can access and generate reports

Permissions are set per screen, giving fine-grained control. For example, a salesperson might have Add and Edit access to Sale Orders but no access to Administration screens.

6.5 Bulk Data Import

Import Items (Products)

The Import Items feature allows administrators to upload a large number of products at once using an Excel or CSV file. This is useful during initial setup or when adding a new product catalogue.

11. Download the provided template file.
12. Fill in product data following the column format exactly.
13. Upload the completed file in the Import Items screen.
14. Review any validation errors shown and correct them.
15. Confirm to complete the import.

Import Customers

Similarly, the Import Customers feature enables bulk upload of customer data from Excel or CSV. Follow the same steps as Import Items, using the customer data template.

6.6 Administration Reports

User Activity

The User Activity report is a complete audit log of all actions performed by each user in the system. It records who did what and when covering logins, data additions, edits, and deletions. This report is essential for security audits and accountability.

Active Users

The Active Users report shows which users are currently logged into the system in real time. Administrators can use this to monitor system usage.

Users List

The Users List report provides a printable directory of all users registered in the system, including their status and assigned branch.

7. Quick Reference

7.1 Common Tasks

Task	Module → Screen
Add a new customer	Company → Customer → Add New
Record a customer payment	Company → Customer Receipt → Add New
View customer balance	Company → Customer → [Click Name] → Customer History
Check outstanding dues	Company → Reports → Receivable
Add a new product	Product → Products → Add New
Check current stock	Product → Reports → Current Stock Summary
Print a barcode	Product → Reports → Product Barcode
Create a sale	Sale → Sale Order → Add New
Generate an invoice	Sale → Sale Invoice → Add New (or from order)
Process a return	Sale → Sale Return → Add New
Add a new user	Administration → Users → Add New
Set user permissions	Administration → User Rights
Check who is logged in	Administration → Reports → Active Users

7.2 Tips & Best Practices

- Always set up Categories, Sub Categories, and UOMs before adding Products.
- Configure User Rights carefully the principle of least privilege helps protect data.
- Use Customer Types to segment customers and simplify filtering in reports.
- Run the Re-Order Level report weekly to prevent stockouts.
- Use the Stock Ledger to trace any discrepancies in inventory levels.
- Regularly review the User Activity report for unusual system access.
- When doing bulk imports, always use the downloaded template custom formats may fail.
- Deactivate users (rather than deleting) when staff leave, to preserve transaction history.
